READ THIS FIRST

How OBRA fits together

A simple guide to the screens, buttons, and database.

One artwork. One connected record.

Add the request, track the work, record received payments, and find it again later.

Wireframe = a screen plan

It shows where things go and what a tap should do.

Database = the app's notebook

It keeps saved details after the screen closes.

This guide = the connection

Follow a button, then see what information it reads or changes.

FIND THE PART YOU NEED

Pages 2-4	Main sections, Home, and commission lists
Pages 5-9	Add work, view details, update work, record money
Pages 10-14	History, Insights, editing, Reconnect, and visual rules
Pages 15-18	Database map, screen connections, example, and checks

The screenshots use fictional data. Different boards show different example moments. Follow the behavior explained here; do not copy sample totals into the real app.

THE BIG MAP

The five main sections

Use the same five tabs, in the same order, on every main screen.

HOME

What should I do next?

Earnings preview, current work, unfinished tasks, queue.

Add commission / View all / View insights

COMMISSIONS

Which artwork am I looking for?

Current, Queued, and Completed are filters of one list.

Tap an artwork to open its Details

HISTORY

What money came in?

One list of received payments across all artwork.

Tap a payment to open its parent artwork

INSIGHTS

How are my earnings doing?

Monthly totals, all-time totals, balances, and charts.

View payments opens History for the selected month

RECONNECT

Which past clients ordered similar work?

Select current work; see previous clients with matching type and genre.

View previous commission opens that past artwork

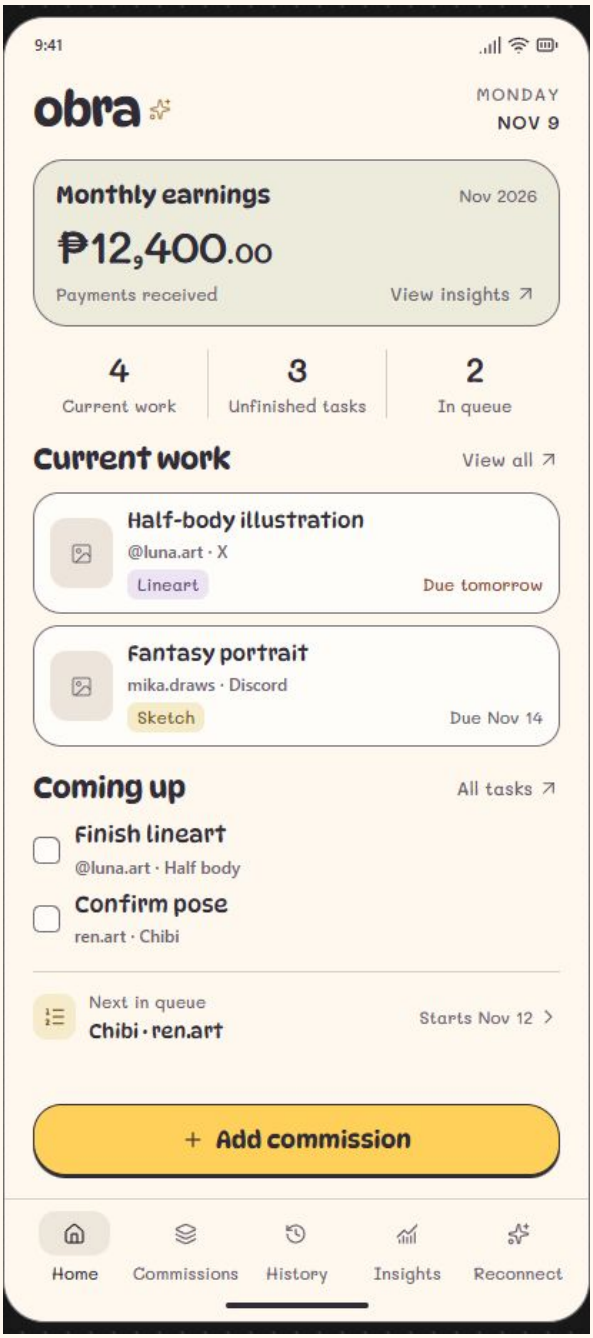

Details is the meeting point

Artwork cards, payment rows, and Reconnect suggestions all lead to the right Commission Details record.

WF-01

Home: your quick studio view

A summary of saved work and received money, with shortcuts to the details.

1 **Monthly earnings**

Money actually received in that month. View insights opens the report with the same month.

2 **Counts and artwork cards**

Current work opens Current; In queue opens Queued. Tap an artwork card for its Details.

3 **Coming up / All tasks**

Tap a task title to open its artwork. Tap its checkbox to mark only that task done.

4 **Next in queue**

Opens the queued artwork. Opening it does not start the job.

5 **Add commission**

Opens Client details, the first of four intake steps.

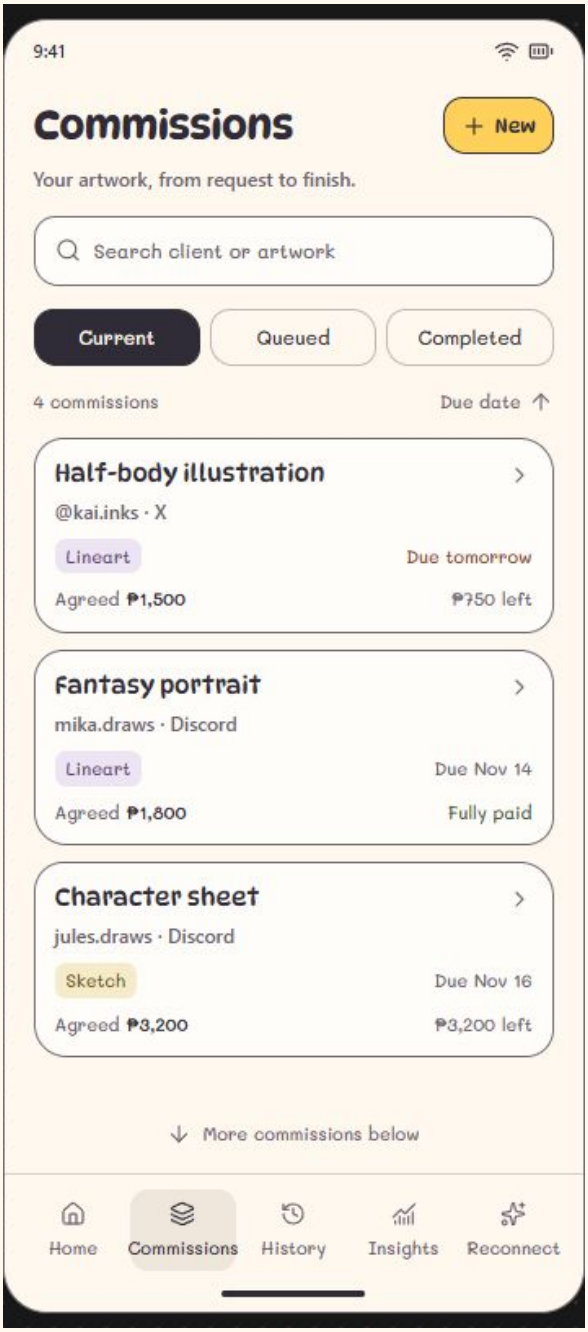

Database connection

Reads commissions, checklist items, and payments. Only a task checkbox changes a record here; ordinary navigation reads information.

WF-02

Commissions: one list, three views

Current, Queued, and Completed show different groups of the same saved artwork.

1 **Current**

Work already started. Shows the creative stage and overall deadline.

2 **Queued**

Accepted work waiting to start. Open Details, then use Start commission when ready.

3 **Completed**

Finished artwork. It may still have an unpaid balance.

4 **Search / + New**

Search narrows the list by the visible client/artwork text. + New opens the Add form.

5 **Tap an artwork**

Open that exact record in Details. Back restores the list, filter, and scroll position.

Database connection

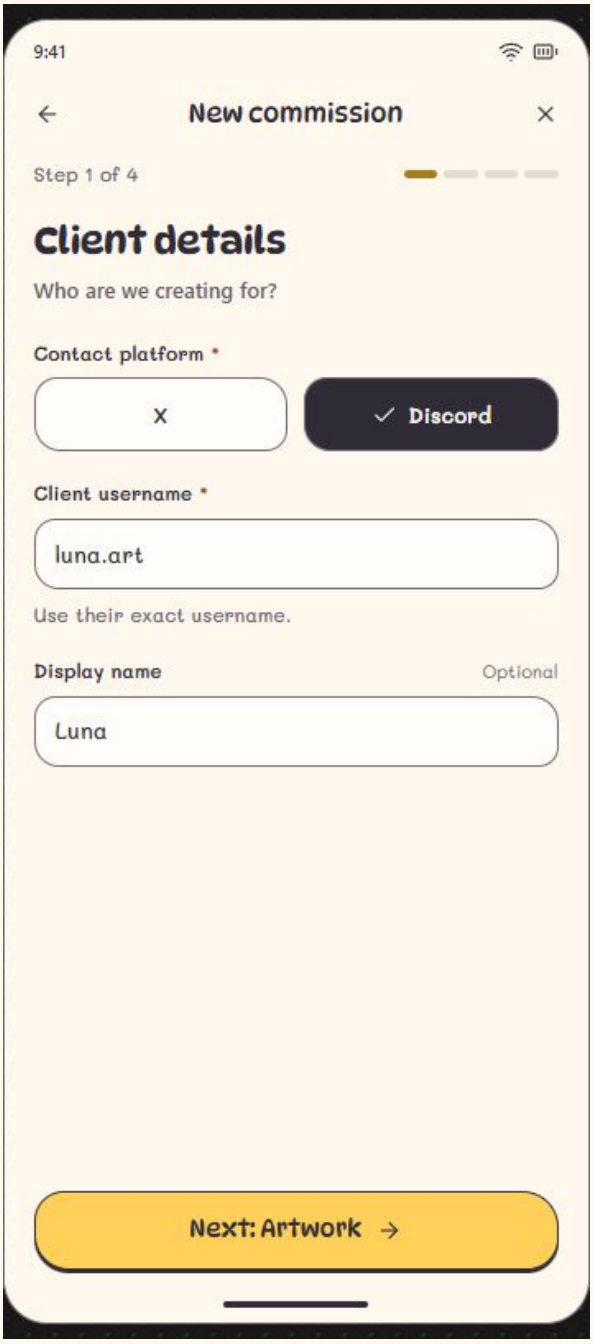

Reads commissions filtered by work status, plus client, type, and calculated payment totals. Filtering or searching saves nothing.

WF-03 + WF-04 / STEPS 1 AND 2

Add a commission: who and what

Start from Home > Add commission or Commissions > + New.

1. Client details

2. Artwork brief

Client details > Next: Artwork > Artwork brief

Step 1: Choose X or Discord, enter the username, and optionally add a display name. Next checks required contact fields.

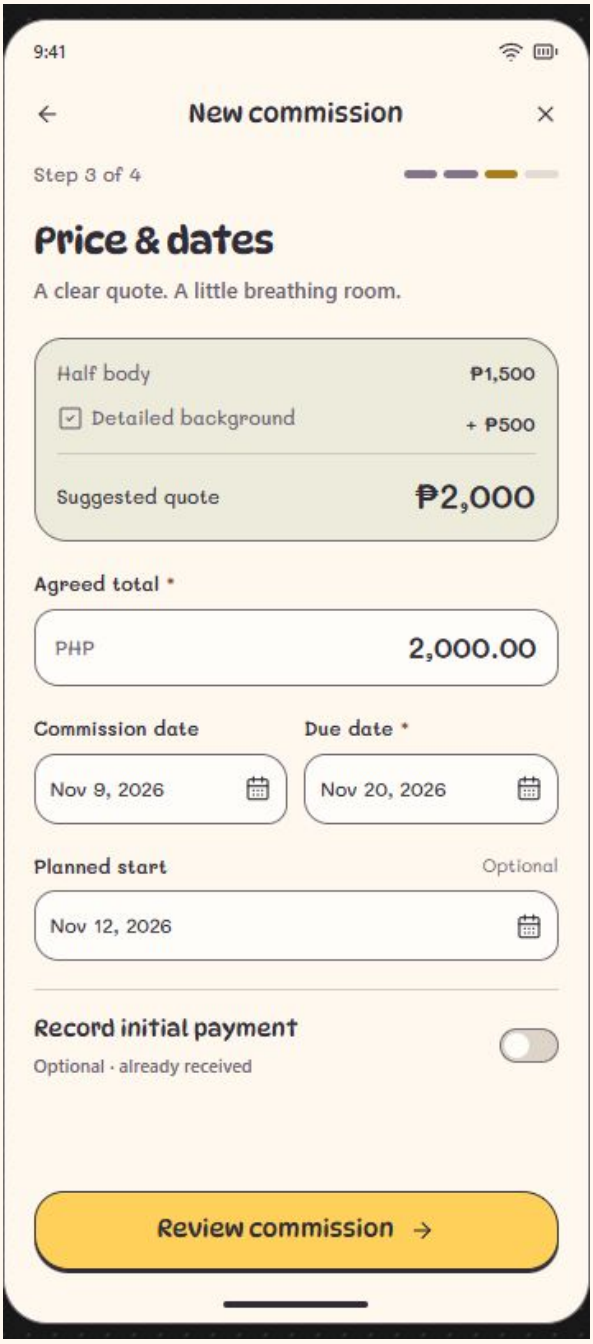

Step 2: Enter title, type, genre/style, pose/brief, and optional references. Add image opens the picker; cancelling keeps the draft.

WF-05 + WF-06 / STEPS 3 AND 4

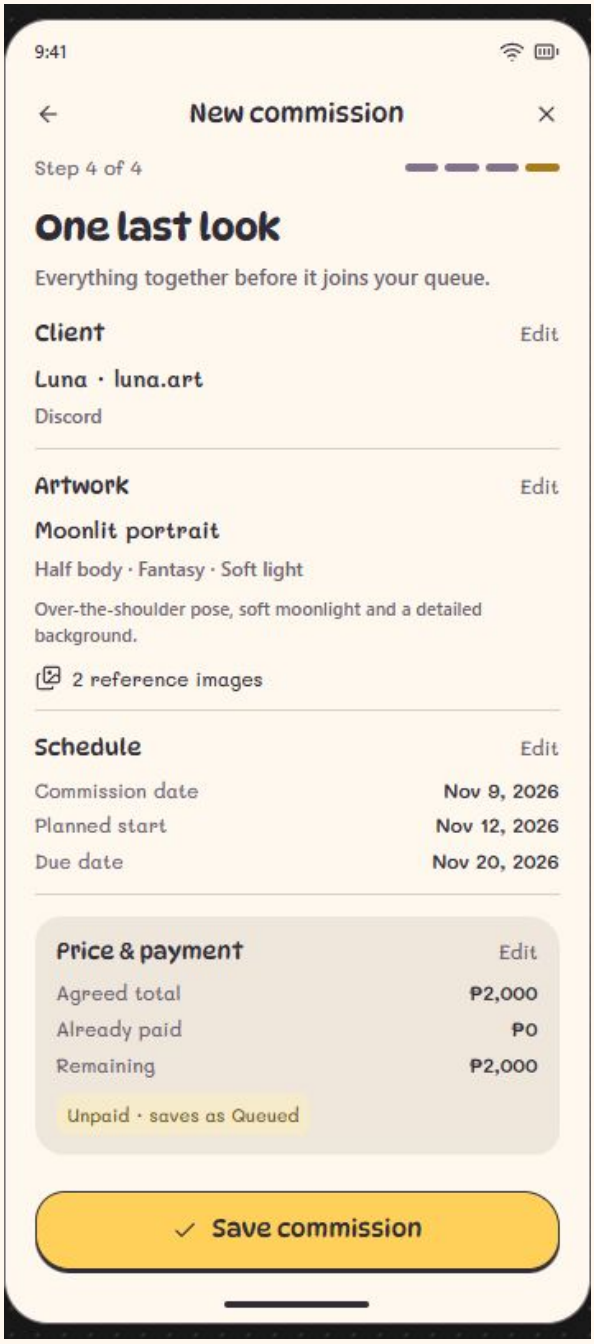

Add a commission: price and Save

Next and Review keep a draft. Only Save commission creates the saved artwork.

3. Price & dates

4. Review

Price & dates > Review commission > Save commission > Details

Step 3: Set agreed price and dates. Initial payment is optional and means money already received. If on, enter amount, date, and method.

Step 4: Check everything. Edit returns to that part. Save writes one queued artwork and its related records together, then opens Details.

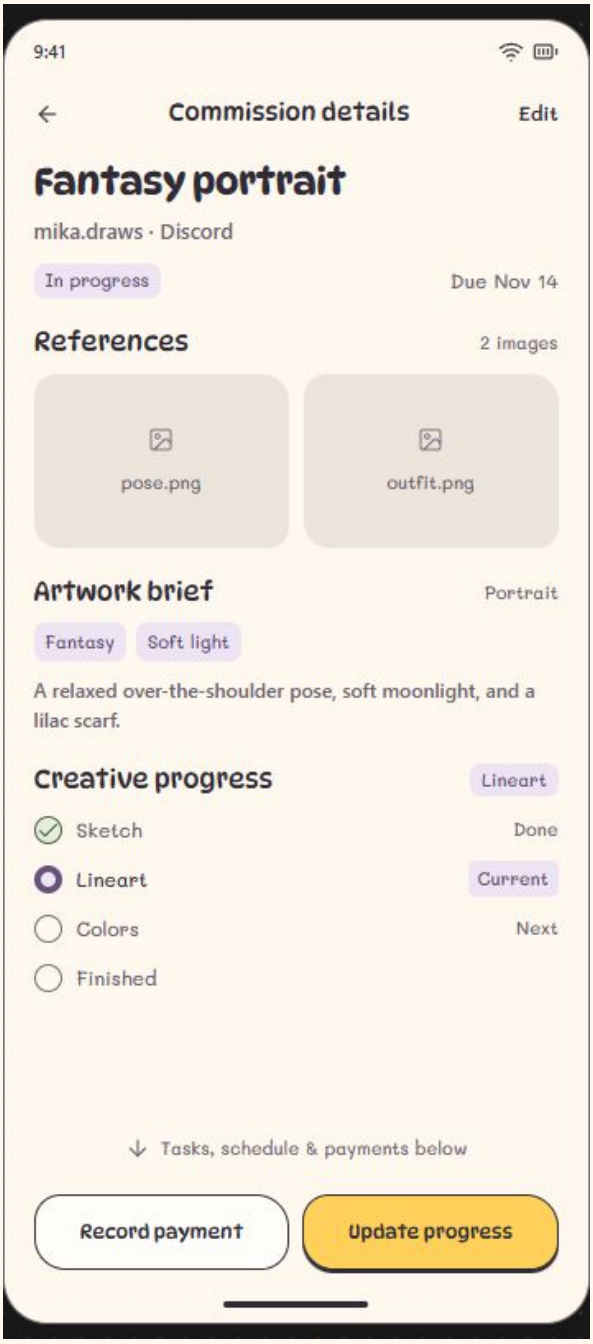

Save failure: Keep the draft. A retry must not create a second commission or payment.

WF-07

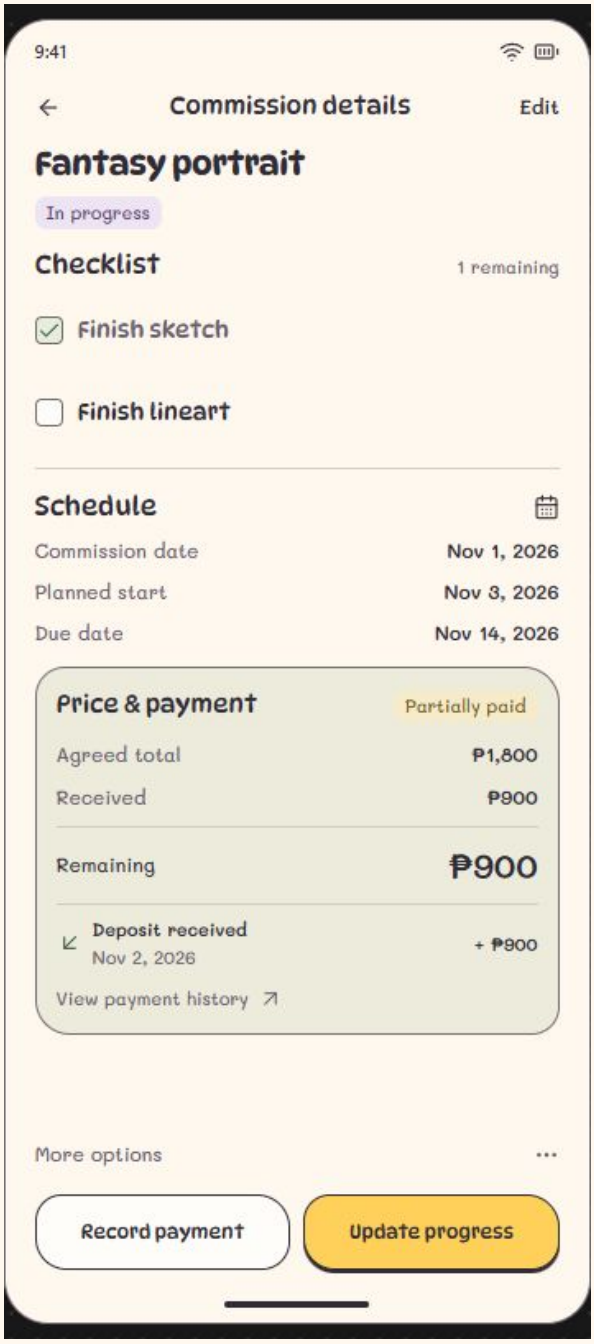

Details: the artwork's main folder

These two pictures are the TOP and LOWER PART of one scrolling page.

Top: artwork and progress

Scroll down: tasks, dates, money

Swipe up to see the lower part. There is no Next button between these views.

Main actions: Edit opens the prefilled form. Update progress changes the work stage. Record payment opens the money form.

Other actions: Image opens the viewer. Payment history shows receipts for this artwork. Back returns to where you came from.

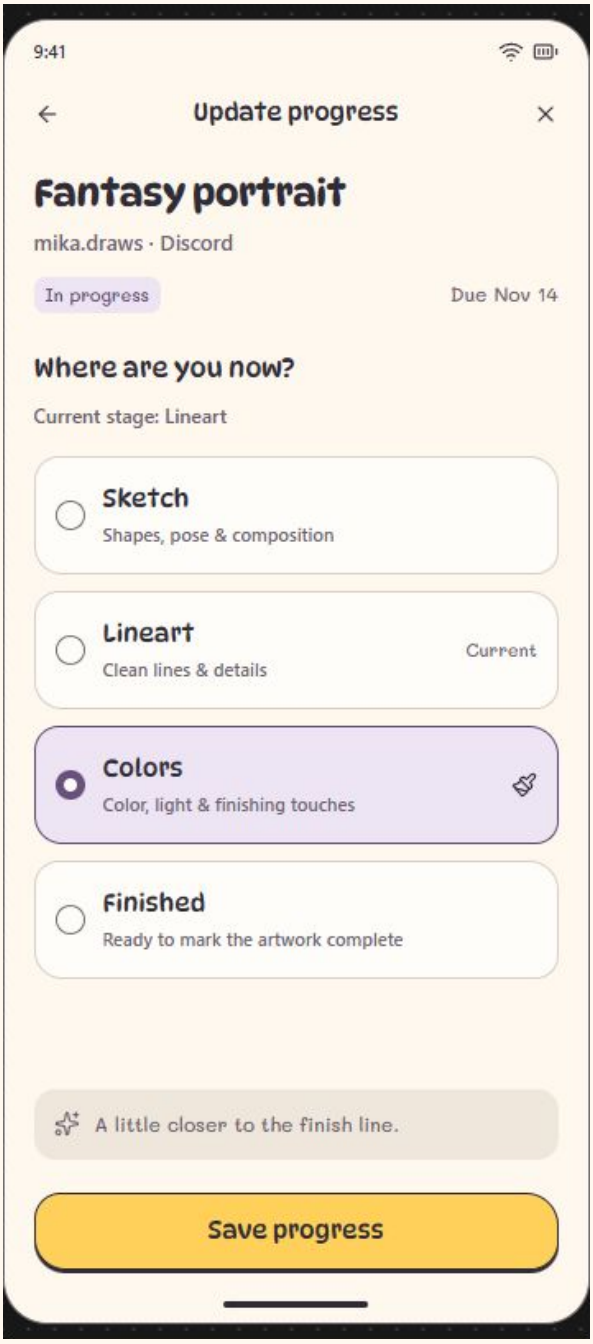

Reads one commission plus its client, references, tasks, dates, and payments. Keep the same saved record when you scroll.

WF-07 > WF-10 > WF-11

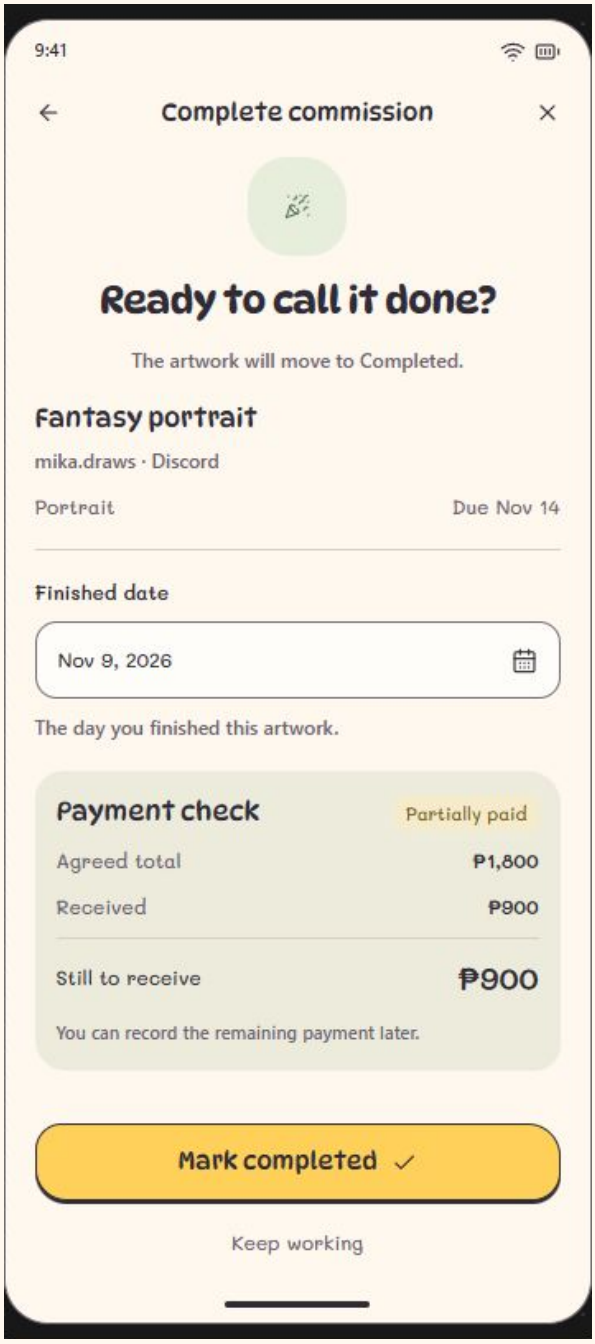

Start work, then update progress

Work progress and payment progress are two different things.

Update progress: choose a stage

Complete commission: confirm the date

Queued Details > Start commission | Current Details > Update progress

Start: Saves In progress, Sketch, and the actual start date. **Save progress:** Saves the selected stage and returns to Details.

Finished: Opens Review completion. Mark completed saves the actual finish date and moves the artwork to Completed. Keep working returns without completing it.

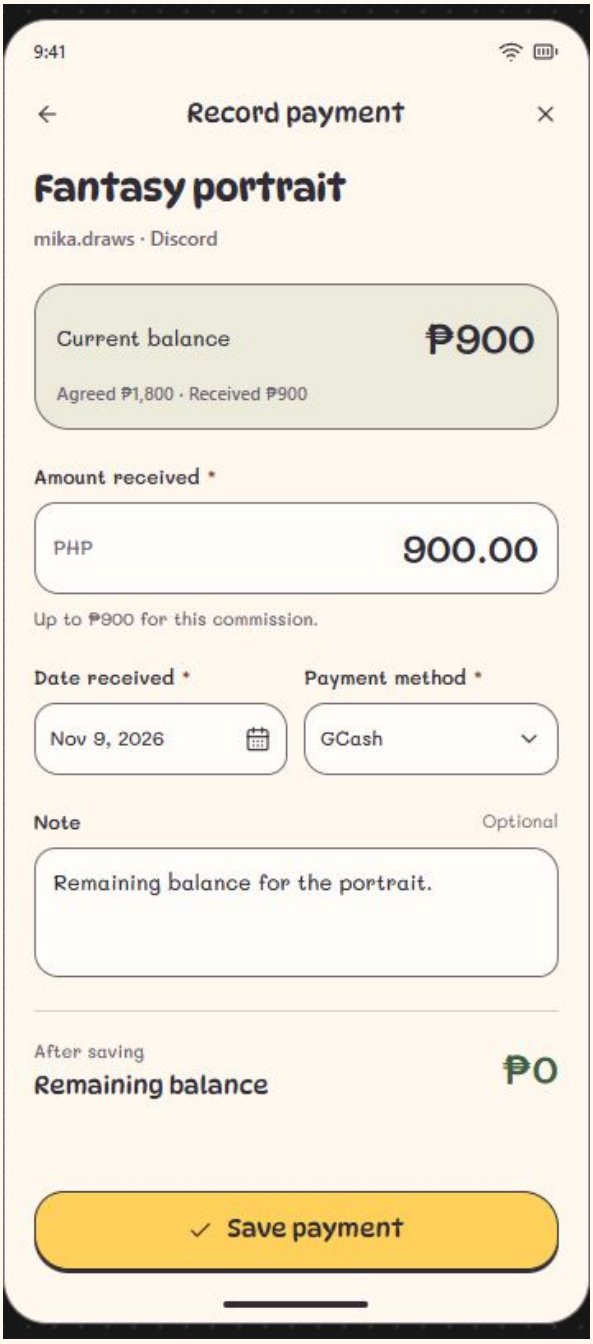

Payments and task checkboxes stay as they were. Finishing the drawing does not mean the balance was paid.

WF-08 + WF-09

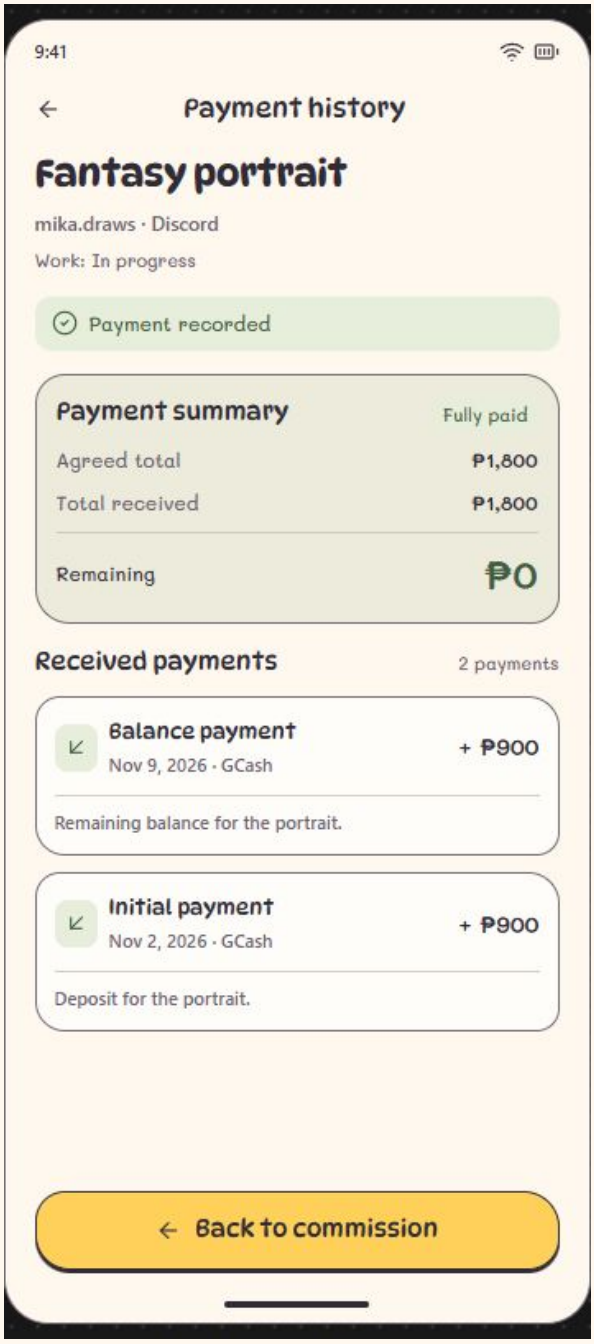

Record money that was received

This records a payment in OBRA. It does not send or transfer money.

Record payment: before Save

Payment history: after Save

Details / Payment history > Record payment > Save payment > Updated history

Enter: Amount, actual received date, method, and an optional note. The amount must be positive and fit the remaining balance.

Save: Adds one receipt. Totals refresh everywhere. Back to commission opens the same artwork; its work stage stays unchanged.

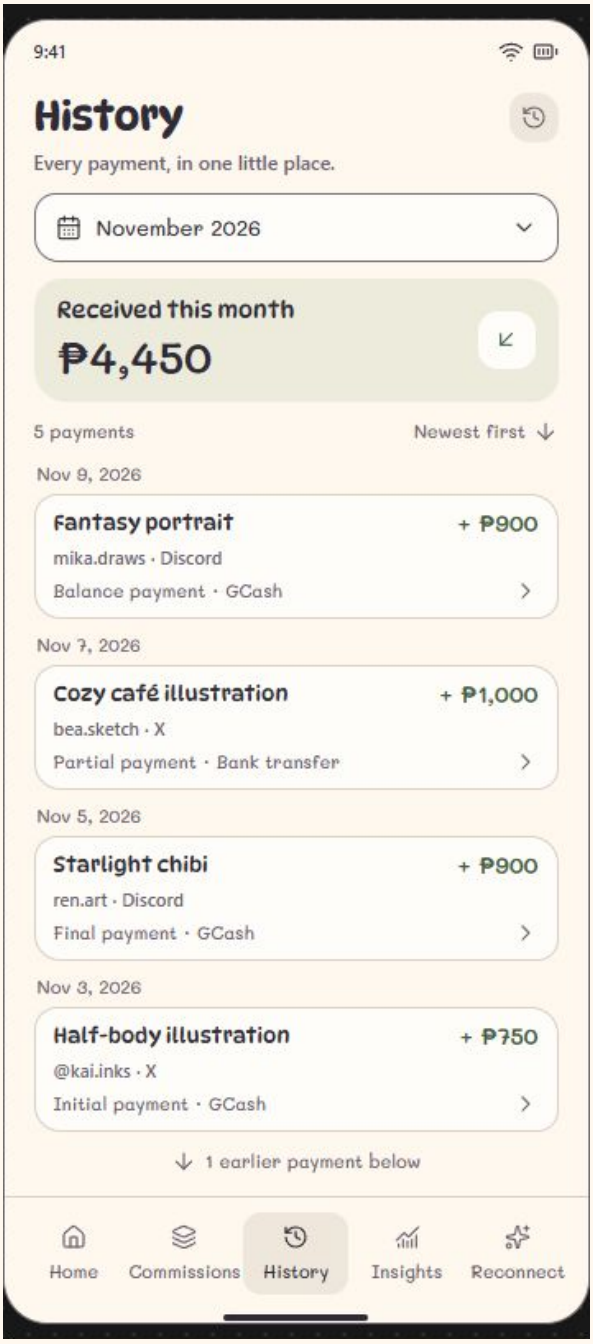

Per-artwork Payment history (WF-08) shows only this artwork's receipts. Main History (WF-12) shows receipts across all artwork.

WF-12 + WF-13

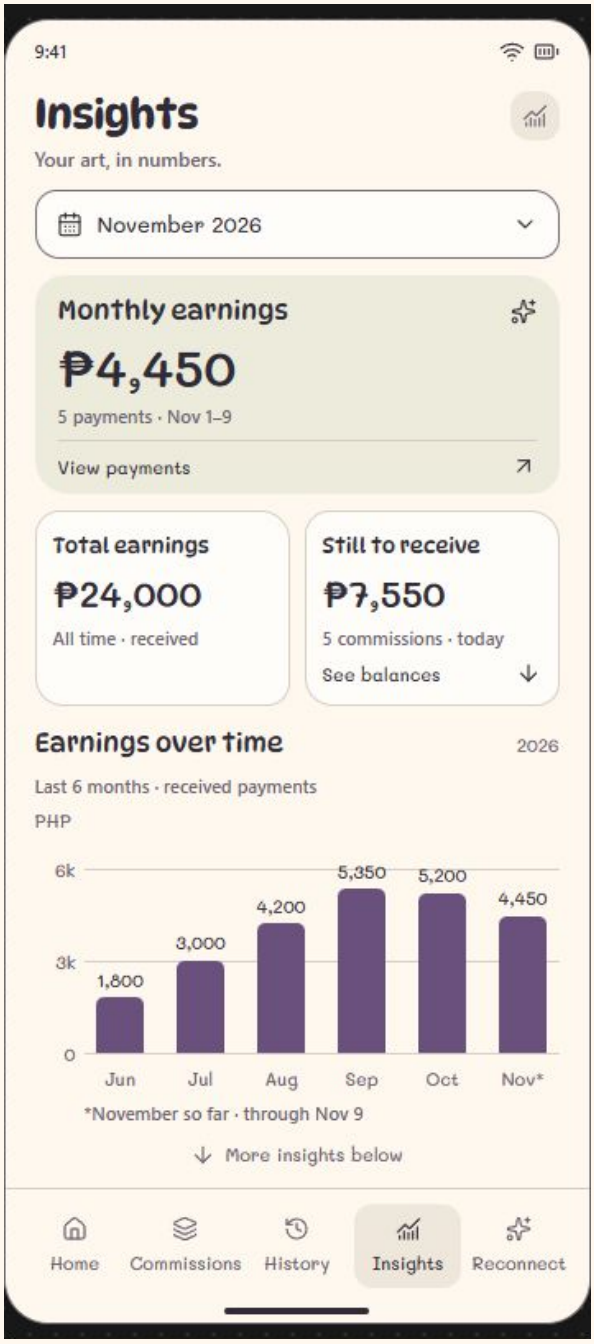

History and Insights have different jobs

Both use the same received-payment records, presented in different ways.

History: individual received payments

Insights: totals and charts

Insights > View payments > History, with the same month selected

History: Pick a month, see its receipt total and payment rows, then tap a row to open the related artwork in Details.

Insights: Pick a month for earnings/charts. Scroll for more. See balances scrolls within Insights. Current balances/all-time totals keep their own scope.

Do not add quoted prices or unpaid balances to earnings. Insights top/lower drawings are one scrolling report, not separate pages.

WF-14 TO WF-18

Edit a record or view its images

Editing reuses the four intake steps. Viewing an image is a separate, read-only action.

Edit: prefilled Client details

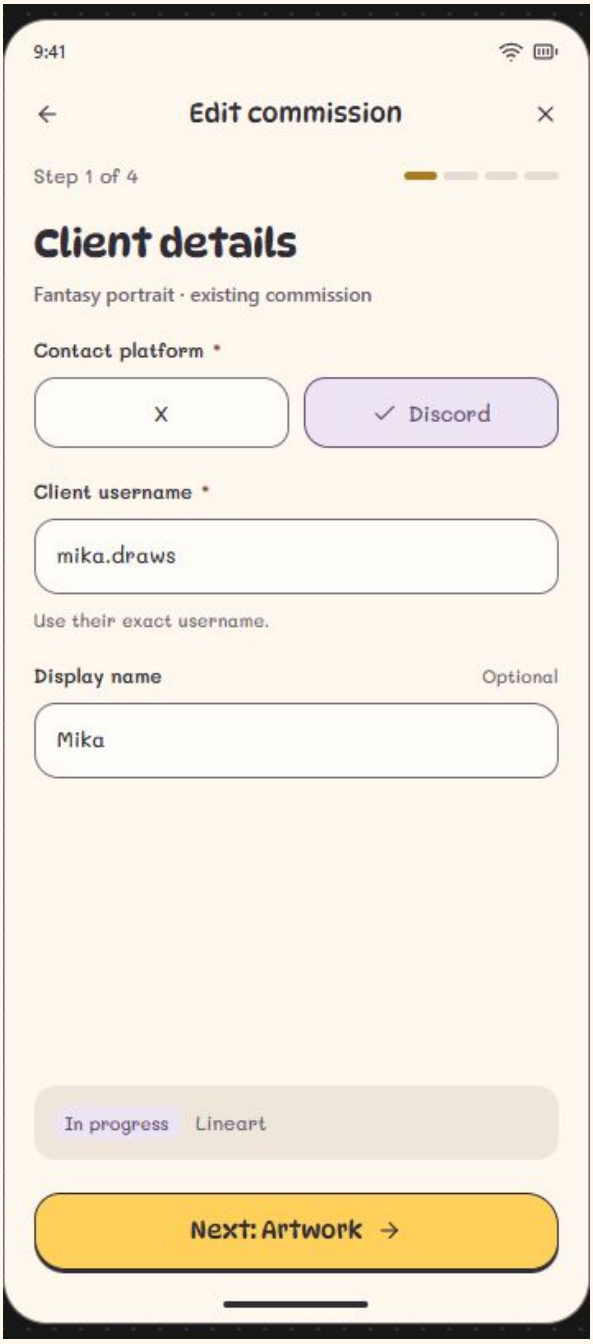

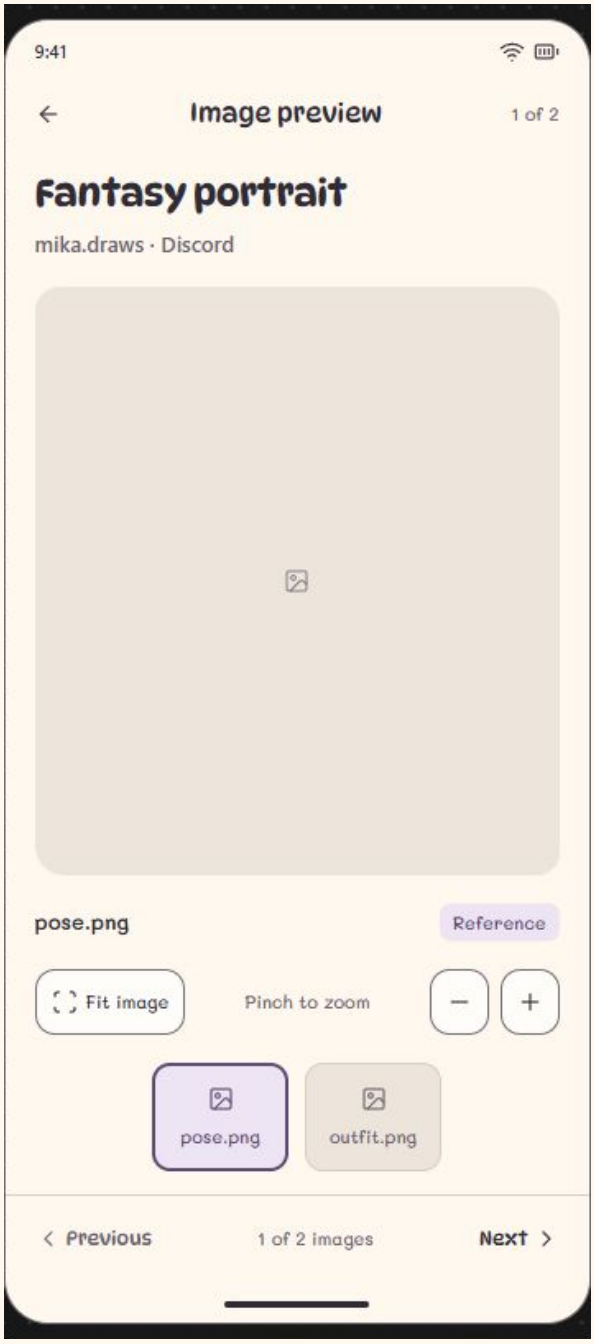

Image viewer: larger reference

Details > Edit > Client > Artwork > Price & dates > Review changes > Save changes

Edit: Change the existing request, review changes, and save to the same artwork. No initial-payment toggle; record new money through Record payment.

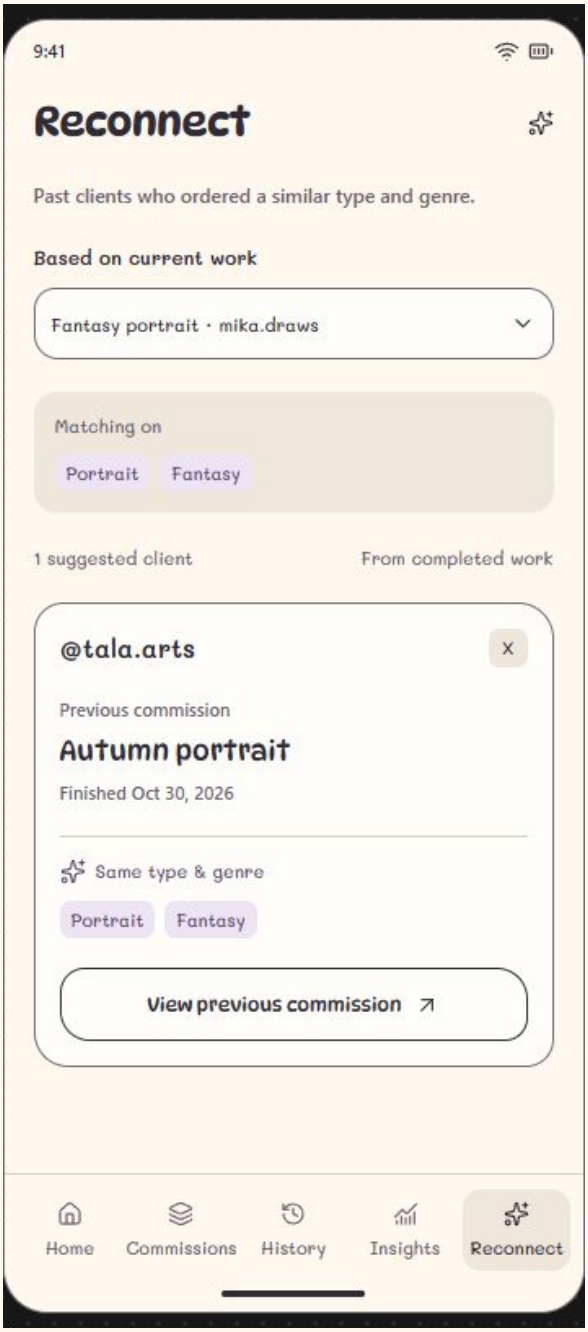

Viewer: Tap a thumbnail, zoom/fit, or choose another image. Back returns to the same place, keeping any unsaved form draft.

Save changes preserves receipts, work status/stage, and task states. Removing a draft reference takes effect only when that form is saved.

WF-19

Reconnect: find relevant past clients

A separate main section that uses type and genre, not images or money.

1 **Choose current work**

The selector shows In-progress artwork. Its type and genre provide the matching context.

2 **Read the suggestion**

A card shows a previous client, their completed artwork, finish date, and why it matches.

3 **View previous commission**

Opens that past artwork in Details. Back restores Reconnect and the selected current work.

4 **No matches / loading / error**

Keep the selected work visible. Explain no results, show loading, or offer Retry if reading failed.

The artist chooses whether to make contact manually. No Send message action is added.

Database connection and proposal

Reads the selected current commission and completed history. The proposed rule matches BOTH type and primary genre, then shows one card per client. The algorithm team reviews the final policy.

WF-20 + SHARED RULES

Small actions and Back behavior

A screen should return you to the place you were using, with your context intact.

All tasks (WF-20)

Home > All tasks / unfinished-task count opens a list grouped by artwork. The separate static drawing is still pending; the clickable file demonstrates the route.

Task title: opens its artwork. **Checkbox:** changes only that task. There are no task-specific due dates or extra task-detail pages.

When the user does this...	The app should do this...
Back from Details	Restore the original list/report, its filter or month, and scroll position.
Back in Add/Edit steps	Go to the previous step and keep entered values.
Close a changed form	Ask whether to keep editing or discard. Discard does not save the draft.
Return from image picker/viewer	Keep the original form values and current step. Cancelling a picker adds nothing.
Enter invalid information	Stay on the form and explain the field to fix. Do not save half the request.
Save fails	Keep the draft and show a useful error. Retry should save once.
No work, payments, or recommendations	Show a clear empty message and a helpful next action.

Scrolling is not navigation

WF-07 top/lower and WF-13 top/lower are the same page. An empty month, a selected stage, or a success message is a state, not another numbered screen.

LAYOUT RECIPE

Keep the visual style consistent

Use a warm, simple layout that is easy to tap and read.

DynaPuff

Use for screen headings, section labels, artwork/task titles, and main actions.

Mali

Use for usernames, dates, amounts, form text, helper messages, chips, and tab labels.

The actual font pairing is visible in the screen pictures. This guide uses a simpler reading font for its explanations.

Background
#FFF8EF

Cards / fields
#FFFDF9

Text
#302C37

Main action
#FFD15B

Earnings
#ECEBDC

Progress
#EDE4F4

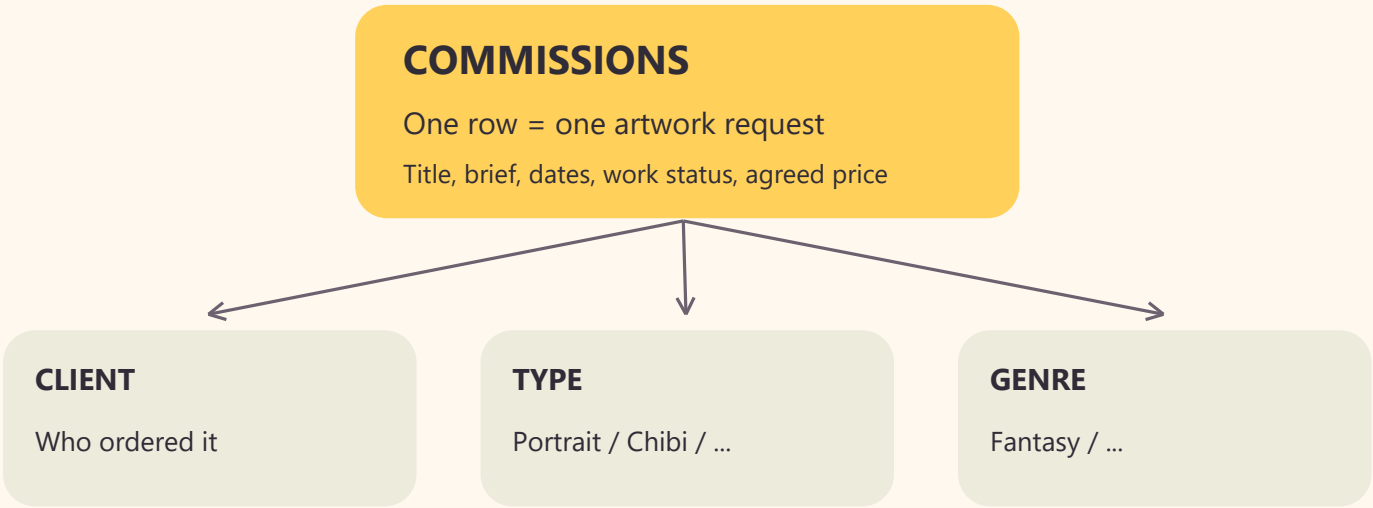

Layout item	Simple rule
Phone reference	Medium Phone portrait: about 411 x 914 dp, including system areas.
Spacing	About 20 dp at the sides; 8 / 16 / 24 dp for small / medium / large gaps.
Buttons and cards	Rounded cards; clear labels; main actions about 48-52 dp tall.
Touch and text	Allow at least 48 x 48 dp touch areas. Support larger text, keyboard, and scrolling.
Navigation	Five tabs on main pages. Back on forms, Details, payment pages, and image viewer.

The font pairing is selected. Exact colors, sizes, and spacing are the current proposed values. Pair status colors with words such as Completed or Partially paid.

DATABASE MAP

The database is a set of linked lists

A table is a list of one kind of information. A row is one saved item in that list.

Many artworks can point to the same client, type, or genre.

These lists below keep the artwork's number:

PAYMENTS	One row per received payment. A commission can have several.
ATTACHMENTS	One row per reference/final image location.
CHECKLIST ITEMS	One row per task, with a done / unfinished mark.
QUOTE LINES	Package and add-on prices captured for this request.
STYLE TAGS	Extra labels such as Soft light. Kept separate from genre.

How the connection works

Each saved artwork has an internal number. Its payments, tasks, and images keep that number so the app knows which artwork owns them. Users do not need to type or see these numbers.

SCREEN-TO-DATA CHEAT SHEET

Which database lists does each screen use?

Read = show saved information. Write = add or change saved information.

Screen / journey	Reads	Writes only when confirmed
Home (01)	Payments, active artwork, task counts	Task checkbox only
Commissions (02)	Artwork, client/type, payment totals	Nothing for a filter/search
Add (03-06)	Type/genre choices; unsaved draft	Save: artwork + related client, tags, quote, references, tasks; optional receipt
Details (07)	One artwork and all its related information	Start work or a task checkbox
Payment history (08)	Receipts for one artwork	Nothing
Record payment (09)	Agreed price and current balance	Save: one new receipt
Progress / complete (10-11)	Current stage, dates, and balance	Save stage or confirm finished date/status
Main History (12)	Receipts across artwork	Nothing
Insights (13)	Totals calculated from receipts and artwork	Nothing
Edit (14-17)	Existing artwork and request information	Save changes: permitted fields on the same record
Image viewer (18)	Image location and related image list	Nothing for zoom/view/Back
Reconnect (19)	Current type/genre and completed history	Nothing
All tasks (20)	Unfinished tasks and their artwork	One checkbox state

History and charts do not need their own copied records

Calculate them from payments and commissions. Completing artwork changes the existing record; it does not copy it into a separate Previous Commissions table.

ONE SIMPLE EXAMPLE

Follow one artwork through the database

Fictional example: Luna orders a Fantasy portrait for PHP 2,000.

1. Save the request

Create the client if needed, then one commission linked to Portrait and Fantasy. Save references, quote lines, and default tasks with that artwork. No initial payment in this example.

Queued | Received PHP 0 | Remaining PHP 2,000

2. Receive PHP 500 on October 31

Record payment adds one PHP 500 receipt linked to the same artwork. Start commission separately changes the work to In progress / Sketch.

October earnings + PHP 500 | Remaining PHP 1,500

3. Finish the artwork on November 8

Review completion and confirm the actual date. The same artwork now appears under Completed. No receipt is added by completion.

Completed | Received PHP 500 | Still owed PHP 1,500

4. Receive PHP 1,500 on November 10

Add a second receipt. Both receipts still point to the same artwork, so its payment history shows the deposit and balance.

November earnings + PHP 1,500 | Remaining PHP 0

The same saved receipts answer three questions

Payment history: what did Luna pay? Main History: what payments came in? Insights: October PHP 500, November PHP 1,500, all-time PHP 2,000. The quoted price is not added again.

FINAL CHECKS AND WHERE TO LOOK

Before your partner starts building

Use this PDF for understanding. Use the Markdown guides for exact implementation details.

Three rules to remember

1. Next is not Save. Keep form values as a draft until the final Save.

2. Finished is not Paid. Work stage and received money change separately.

3. Save together, save once. A failed save keeps no half-finished group of records; retry must not duplicate it.

Try this simple handoff test

- **A** Add a request with no payment; find it in Queued.
- **B** Start it, check a task, and save a creative stage.
- **C** Record part of the money; check Details, History, and Insights.
- **D** Complete the artwork while it still has a balance.
- **E** Record the balance; verify two receipts and no duplicate artwork.
- **F** Open a Reconnect suggestion and use Back to restore the selection.

Proposals still needing team review

One primary genre, contact linking, completion meaning, quote rules, cancellation/refunds, and final-image requirements. Reconnect exact matching/order are proposed defaults. A simple filter is not a backtracking algorithm.

FILES IN THIS PROJECT FOLDER

layout.md	Exact numbered screens, routes, font and color rules.
database-guide.md	Full proposed SQLite tables, fields, SQL, and save rules.
reconnect-algo.md	Simple recommendation policy and algorithm-team contract.
docs/wireframes/clickable.html	Open locally in a browser to try the phone wireframe.

Source snapshot: these project guides and saved boards, November 10, 2026. This PDF adds no app code or database. The clickable demo resets on reload; the real Android app will read/write SQLite.
